InAmigos Foundation

Introduction

- The website of InAmigos Foundation serves as a digital platform to represent the foundation's mission, activities, and social initiatives. The primary purpose of the website is to create awareness about the foundation's work, engage volunteers and donors, showcase events and causes, and provide easy access to information for users.
- A well-designed foundation website plays a crucial role in building trust, credibility, and user engagement. It should clearly communicate the organization's goals, allow users to explore ongoing programs, and encourage participation through features such as donations, event updates, and contact options.
- This document presents a website improvement analysis of the InAmigos Foundation website by examining its design, content, layout, user experience, and functionality. The analysis aims to identify usability issues and suggest improvements that can enhance the website's professionalism, accessibility, and overall user experience.

Objective of the Analysis

- Evaluate the effectiveness of the website's user interface and design
- Identify content and navigation issues
- Analyze user experience and functionality problems
- Suggest improvements to make the website more user-friendly and professional

Homepage & Website Functionality Improvement Analysis

1. User Interface (UI) Design

The homepage requires a more attractive and professional color scheme. The current colors do not create strong visual appeal or brand identity. Using a consistent color palette with better contrast will improve the overall user interface and make the website appear more professional and trustworthy.

Recommended content on the homepage:

- Clear headline describing the foundation's mission
- Short introductory text about the foundation
- High-quality images related to social work
- Highlighted call-to-action buttons such as *Join Us* and *Donate*

Expected result:

When users land on the homepage, they should immediately understand:

- Who the foundation is
- What causes it supports
- How they can participate

2. “Join Us” Button Issue

The “Join Us” button on the homepage is not functioning properly. When the button is clicked, it redirects to a blank black page, which creates a poor user experience and may discourage users from engaging further.

Recommended content on this page:

- Brief description of how users can join the foundation
- Volunteer registration form (Name, Email, Phone, Area of Interest)
- Information about volunteer roles
- Submit button with confirmation message

Purpose:

To allow users to become volunteers or members of the foundation easily.

2. Donation Page – Error Description & Improvement Analysis

1. Page Context & User Flow Issue

Although the page displays “Thanks For Your Support!”, the user has not yet completed any donation. This message appears before the payment process is finished, which can confuse users.

Error Description:

- The confirmation message is shown prematurely.
- Users may assume the donation is already successful.

Suggested Improvement:

- Display “Thanks for Your Support” **only after successful payment**.
- Before payment, use a heading like “*Support Our Cause*” or “*Make a Donation*”.

2. Donation Amount Display Error

The **Donate button** shows “**Donate ₹0.00**”, even before the user enters an amount.

Error Description:

- The button does not dynamically update based on the entered amount.
- This creates confusion and reduces trust.

Suggested Improvement:

- Update the Donate button amount dynamically once the user enters a value.
- Disable the Donate button until a valid amount is entered.

3. Missing Input Validation & Error Messages

The form fields (Amount, Email, Phone) do not show visible **validation or error messages**.

Error Description:

- Users are not informed if they enter invalid or incomplete details.
- No guidance is provided for incorrect input.

Suggested Improvement:

- Add real-time validation messages (e.g., “Please enter a valid email”).
- Highlight required fields clearly with helpful feedback.

4. Trust & Transparency Information Placement

Important certification and registration details are shown, but the **layout is text-heavy** and may not attract user attention.

Error Description:

- Excessive text reduces readability.
- Important trust indicators are not visually highlighted.

Suggested Improvement:

- Convert certifications into icons or badges.
- Use short bullet points or cards for better readability.

5. Visual Balance & Layout Issue

The right-side payment card visually dominates the page, while the left content looks dense and text-heavy.

Error Description:

- Uneven visual balance between content and form.
- Reduced clarity for first-time users.

Suggested Improvement:

- Improve spacing and alignment between sections.
- Reduce text length and increase white space.

6. Accessibility & UX Concerns

- Font size of informational text is relatively small.
- No helper text is provided for phone or email fields.

Suggested Improvement:

- Increase font size slightly for readability.
- Add helper text below input fields (e.g., “We will send the receipt to this email”).

The screenshot displays the InAmigos Foundation website. On the left, a green vertical bar is visible. The main content area has a light gray background. At the top left, there is a logo for INAMIGOS FOUNDATION. Below it, the text 'Thanks For Your Support!' is followed by a green horizontal line. A paragraph states: 'InAmigos Foundation is a Registered Non-Profit Organization under the Companies Act 2013, Licensed by the Central Government.' Below this, there are four bullet points listing certifications: '80G & 12A Certified: Approved by the Commissioner of Income Tax after thorough compliance and proof of impactful work.', 'NGO DARPAN Registered with NITI Aayog (Govt. Body)', 'CSR-1 Registered', and 'IAF ISO 9001:2015 Certified (International Accreditation Forum)'. At the bottom left, a paragraph states: 'All legal documents are accessible via the Ministry of Corporate Affairs website. We maintain transparent records.'

On the right, there is a white 'Payment Details' form with a green horizontal line. It contains three input fields: 'Amount' with a placeholder '₹ Enter Amount', 'Email' with a placeholder, and 'Phone' with a placeholder 'IN +91'. Below the form, there are logos for 'LIPPA', 'VISA', 'RuPay', and 'MasterCard'. A green button labeled 'Donate ₹ 0.00' is positioned to the right of the form.

3. “View All Causes” Button Issue

When scrolling down the homepage, the “View All Causes” button is visible; however, clicking on it opens a blank black page instead of displaying relevant content.

Recommended content on this page:

- List of all causes supported by the foundation
- Short description for each cause
- Images related to each cause
- “Read More” or “Support This Cause” button

Purpose:

To inform users about the foundation’s initiatives and areas of social impact.

4. “Our Events” Section Issues

What should appear when clicked:

- **“Read More”** should open a detailed **Event Description page**
- **Community** and **Education** buttons should filter or redirect to relevant events

Recommended content on the event details page:

- Event title
- Date, time, and location
- Event description
- Images from past events
- Registration or participation option

Purpose:

- To showcase the foundation’s activities and encourage participation in events.

5. Gallery Section Issues

What should appear when clicked:

When a user clicks on any image, it should open in **full view (lightbox or popup)**.

Recommended gallery features:

- Full-size image preview
- Next/previous image navigation
- Caption describing the event or activity

Purpose:

To visually demonstrate the foundation's impact and build trust with users.

6. Navigation & Footer Button Issues

What should appear when clicked:

Each navigation and footer button should redirect to its respective page.

Recommended pages linked from navigation/footer:

- Home → Homepage
- About Us → Foundation overview, mission & vision
- Causes → Programs and initiatives
- Events → Upcoming and past events
- Gallery → Image gallery
- Contact → Contact details and form

Purpose:

- To provide smooth navigation and easy access to all important information.

7. Overall User Experience Impact

Expected user experience:

- No broken links or blank pages
- Smooth navigation between pages
- Clear user journey from homepage to action pages

Improvement goal:

To make the website easy to use, professional, and engaging for all users.

Conclusion

The foundation website should clearly communicate its mission, showcase its initiatives, and provide functional interaction points for users. By fixing navigation issues, enabling button functionality, and improving UI design, the website can deliver a professional, user-friendly, and trustworthy experience. These improvements will increase user engagement and support for the foundation's activities.
